

Oricades Lore & Audio Archive: Master Documentation

Chanealogs:

V1.2:

Changed rymi and oris lore

Deepened every lore

Detailed the explanations

Made New probability timelines for the ongoing theories!

Overview

This is an documentation that i made to SUMMARIZE the ORICADE LORE BY THE UCRRENT OF 4.10.26 date!(including Zyyn, Ori, Rymi, and Milly etc), and probability timelines derived from the recovered audio pieces.Recovered the hidden texts from the decoder , made an python script to do that.INCLUDES THROIES MAY NOT BE FULLY RIGHT!

PLEASE MESSAGE ME IF YOU FIND ANY MISTAKES! my gmail is

[this:mehmetuguromeroglu@gmail.com](mailto:mehmetuguromeroglu@gmail.com)

Thanks!

Track Info:

Total tracks 131

Unique tracks:89-100

Lore tracks:10-25

Fragmented lore tracks:10-30

Non Lore Tracks:10-40

Remix and Instrumentals:10-20

1. Track Architecture & Classification

- **Total Recovered Pieces:** 131 tracks (Oricades channel, formerly privated/unlisted or deleted and retrived)
- **Continuous Lore Tracks:** 10-25 core tracks (dictating the main narrative progression and etc.)
- **Supporting / Fragment Pieces:** 10-30 secondary tracks providing atmospheric, structural, or cryptographic puzzle components.

2. Character Lore & Narrative Arcs

(FROM WHAT I KNOW MAY NOT BE LORE ACCURATE!)

Zyyn

From what i know:

In the song forgettable smile ZYNN discovers that girl who he fells in love whit that girl instantly and after that in the song frontfire we see ZYNN tries to to ask her out but she rejects him which causes heart break that he explains by like this in the song WHITE DOE by the following lines :MY hands were up but you werent there , youre the golden light that i keep chasing but can never be whit you, sooo for ZYYNS lore we know this only since no AVALAIBALE songs other then the forgettable smile are there for him , i had to retrieve through playlists. (this is both an theory of those songs SINCE THEYRE NOT FULLY MADE YET! DO NOT TAKE THIS SERIULSY !) and also to deepen the lore Zyyns is also the same place where the IAZ the god is sooo zynn has an chance to be an god but thats an theory soo we will see..

Ori

Now this lore has 2 separate pars so part 1 the start is:

1-Ok so while he was epxloring the universe ??? (isnt known yet) he found the ancient city and thats where rymi was and they fell in love and did some....interesting romantical activities that is not family friendly , anyways then a long time passes and ori commits crimes (in the song over and over again yuri says so) and makes Yuri mad which causes Ori to be almost killed , Then ori and Yuri go gambling which Ori loses and then begs for money...

WE dont know the middle of it so till he releases one ,privated or not we can never know.... but we know the other parts!

2-Soooo after from year ???? to year 2167 ori and rymi worked together to cure cancer and proved the afterlife exits and its an ETERNAL HEAVEN IN DISGUSE but they couldnt release it to public otherwise people would kill themselvs sooo they decided to kill themselves and deleted the work but its probably cause both they cant release the work and also cause Ori committed CRIMES just like it says in the song "over and over

again” so thats probably the reason why Ori and Rymi decided to kill themselves TOGETHER
(checkk the probaility timelines at the bottom to find theories!)

Milly

We know so little about her but all we know is that shes some kind of robotic guide of the afterlife that helps ori? We abloslutly know nothing but thats all we know right now...

IAZ(i am a to z)

The creator (the god) of the world who she made an perfect universe and is also mortal since it says “taking my slow ride alive” and once between humans since she says “suddenly im waking up in greenery whit human machinery crushing each piece of me pretty beak” soooo shes an god but also an mortal? And what does she mean by theres Stars that were there before she even knew????? Sooo she might only be god of this UNIVERSE ONLY and not the real god?those questions are still not answered....yet...(BIGEK/10/26)

Yuri

We dont know as much as Ori and Rymis lore but all we know is that She loves gambling , she has an gun and almsot killed Ori , knows what crimes Ori committed but didnt tell , and won a lot of money after gambling whit Ori? And these are theories since ORICADE DIDNT RELASE AN ANY LORE SONG ABOUT YURI!

Rymi

We know a bit more about her but she is an little warden in the ancient cities of the universe theyre in and fell in love whit ori and from year ???? to year 2167 thye worked together WHIT ORI to prove the afterlife exits and they did and proved that its an ETERNAL HEAVEN IN DISGISE and she told Ori to delete all the work then killed themselves right after! But we dont know why Rymi fully did it?

Fiwu

WE ABSOLOUTLY KNOW NOTHING ABOUT HER NO SONG EVER FOUND
OR RETRIVED!

Loxm

We also dont know anything about her AND NO SONG FOUND OR RETRIVED
AS WELL!

Qyli

WE ALSO DONT KNOW ANYTHING ATLEAST YET???

Tyzi

WE ALSO DONT KNOW ANYTHING ATLEAST YET MAYBE===?-?-?===

???:

F AM APCVH PVJW FN!!!! QHIPZMVUZVYSPXBCD F DOKK BIWM KGTX
UOWT! PVJW FN!!!!

3. Cryptographic & Mathematical Models

- **AI-Aided Decoding:** I used ai to decode some coded and half seen text and double checked my answers!
 - **Mathematical Frameworks:** Recovered the lost messages and HIDDEN EQUATIONS used for the lore in the <https://www.oricade.com/Encrypted> sites on the bottom half of it!
-

4. Probability Timelines

- Zyyn could be an powerful being alongside god?
- IAZ can be not the real god?
- Rymi maybe didnt kill herself cause she didnt appear in the afterlife?
- That afterlifes blue portal maybe Rymis heaven if she killed herself too?
- Maybe ori gambled his life away instead of killing himself??

DECODED TEXTS!!!!(AI HELPED):

- Recovered the lost messages and HIDDEN EQUATIONS used for the lore in the <https://www.oricade.com/Encrypted> sites on the bottom half of it!

and thats what this is:

Part 1: The Decoded Text & Equation Context

- **The Core Cipher:** A Vigenère cipher utilizing the keyword **TOOEMOTIONAL** to unlock the primary lore page text.
- **The Core Linking Phrase:** The decoded text repeatedly binds complex scientific phenomena together using the phrase **"are the ghosts of."** This implies that real-world physical laws are essentially the residual structural "ghosts" left behind by laz's memory storage architecture.

Part 2: The Master List of Equations & Their Functions

1. Quadratic Form / Optimization Equation

$$Q(x) = - \sum_{i=1}^n \sum_{j=1}^n a_{ij} x_i x_j \text{ where } [a_{ij}] > 0$$

- **What it does:** Measures energy minimization and system stability in multivariate systems.
- **Lore Function:** Acts as the mathematical baseline for energy constraints, calculating the baseline cost of keeping the simulation's initial state stable.

2. The Heat Equation

$$\frac{\partial u}{\partial t} - \alpha \nabla^2 u = \frac{f}{\rho C_p}$$

- **What it does:** A parabolic partial differential equation describing how thermal energy diffuses through a given medium over time.
- **Lore Function:** Tracks how energy and emotional data disperse, cool down, or overheat within the closed-system environment of the afterlife.

3. Einstein Field Equations (General Relativity)

$$G_{\mu\nu} + \Lambda g_{\mu\nu} = \frac{8\pi G}{c^4} T_{\mu\nu}$$

- **What it does:** Connects the geometry of spacetime curvature to the distribution of mass, momentum, and energy.
- **Lore Function:** Defines the literal fabric of the universe's space, proving that the simulation obeys physical gravitational laws tied to mass and energy density.

4. Navier-Stokes Momentum Equation

$$\rho \left(\frac{Du_i}{Dt} \right) = \sigma_{ij,j} + f_i$$

- **What it does:** Governs fluid dynamics, describing how viscous fluids and gases flow, swirl, and experience internal stresses.
- **Lore Function:** Models the turbulent, flowing data streams and fluid movement of consciousness within the system's memory pools.

5. Helmholtz Differential Equation

$$\nabla^2 \psi(r) + [k(r)]^2 \psi(r) = -f(r)$$

- **What it does:** A time-independent differential equation used to analyze wave mechanics, acoustic fields, and spatial resonance frequencies.
- **Lore Function:** Calculates the stationary vibrational states and standing waves of entities trapped in stasis.

6. Turing Machine Transition Function

$\delta: (Q \setminusminus \{q_{\text{accept}}, q_{\text{reject}}\}) \times \Gamma^k \rightarrow Q \times \Gamma^k \times \{L, R, S\}$

- **What it does:** Formally defines the computational logic of a Turing machine—how it shifts states, reads and writes tape symbols, and moves left, right, or stays still.
- **Lore Function:** Acts as the underlying computer science code of the simulation itself, proving everything is processed through deterministic computational rules.

7. Kullback-Leibler (KL) Divergence

$$D_{KL}(P \parallel Q) = \int_{-\infty}^{\infty} p(x) \log\left(\frac{p(x)}{q(x)}\right) dx$$

- **What it does:** An information theory formula measuring how one probability distribution diverges from a second, expected probability distribution.
- **Lore Function:** Computes the exact amount of information loss and error deviation between laz's ideal "perfect universe" (Q) and the actual chaotic reality (P) experienced by the beings inside.

8. 3D Surface Area Integral (BSA)

$$\text{BSA} = \int_S \left| \frac{\partial \mathbf{r}}{\partial u} \times \frac{\partial \mathbf{r}}{\partial v} \right| du dv$$

- **What it does:** Calculates the total surface area of a 3D geometric manifold or boundary embedded in space.
- **Lore Function:** Defines the physical boundaries and surface limits of the digital rooms, blocks, and worlds making up the afterlife architecture.

Part 3: Key Numerical Constants Found in the Notes

- **The Entropy Constant (– 5):** The degradation coefficient and memory loss metric for laz while the deity sleeps, subtracting memory and accidentally generating mortal suffering.
- **The Iteration Index (2167):** Marks the specific universe version or simulation run currently being processed by laz's storage architecture, highlighting the repetitive loop of the narrative.

and it was decoded from this :

$$J(l) = - \sum_w g_{yy}(w) \sum_j a_{iz}(j) y_{t_{wx}} \cdot b_u \cdot l_c \text{ evrrp}[t_{wx}] > 0$$
